Results-driven Software & IT Systems Engineer with 2+ years of experience in application support, platform uptime management, system integrations, and DevOps operations. Proven track record in monitoring and resolving application issues, managing API integrations with enterprise systems, and improving service reliability by 50% through infrastructure optimization. Advanced proficiency in Docker containerization, Linux/Unix administration, and CI/CD pipeline management. Experienced in troubleshooting complex IT environments, coordinating with vendors, and implementing security measures to safeguard application platforms. Holds a BSc in Software Engineering with hands-on expertise in Python, PHP, JavaScript, and SQL across multiple database management systems.

Core Competencies	
Microsoft Dynamics 365 Integration SharePoint, Teams, Exchange Online, OneDrive	Fintech Application Monitoring & Uptime Management
API INtegration & Management	Docker & Containerization
Linux/Unix Administration	CI/CD Pipelines (Github Actions)
SQL & Database Management (MySQL, PostgreSQL, MongoDB)	Incident Resolution
Vendor Coordination & SLA Management	Python, PHP, JS, NodeJS
JIRA Service Desk & Ticketing	Windows Server Administration
Scripting & Automation	AWS Cloud Services
Prompt Engineering with Claude, ChatGPT	

Professional Experience	
04/2025 – Present Kampala, Uganda	IT Officer, Software & Applications, Klan Logistics  - Monitor and maintain platform uptime and service availability across core business applications, implementing dashboards and alerts to enable proactive issue identification and resolution. - Trained and supported 200+ field officers on application usage and first-line incident resolution, improving operational efficiency across field operations. - Led end-to-end migration of the Inventory Management System (IMS) from monolithic architecture to containerized microservices using Docker, improving scalability and deployment reliability. - Improved system uptime and service reliability by 50% through infrastructure optimization, monitoring, and proactive incident resolution — directly analogous to FinTech platform availability requirements. - Designed and managed API integrations between internal systems and Microsoft Dynamics 365 Business Central, enabling seamless data exchange across the organization. - Implemented structured Git branching workflows, CI/CD pipelines (GitHub Actions), and release management processes, improving delivery timelines and deployment visibility.

- Coordinated with external vendors for product bug resolution, enhancements, and rollouts, managing SLAs and follow-ups for timely closure.
- Implemented security measures and access controls to safeguard application platforms against unauthorized access and modification.
- Reduced dependency on external vendors by 80% by transitioning system knowledge and infrastructure management in-house, significantly improving support responsiveness.
- Maintained documentation and operational logs for all issue resolutions and system changes; utilized Jira for change management and incident tracking workflows.
- Awarded **Innovative Employee of the Year 2025** for driving system modernization and engineering improvements.

08/2024 – 10/2024
Kampala, Uganda

Software Engineer, Olycash Inc

- Built and maintained web application features and API endpoints for a financial services platform, collaborating with QA teams to ensure quality and uptime.
- Supported application monitoring and troubleshooting to maintain platform stability and performance for end users.
- Wrote and maintained SQL queries and worked with relational databases to support application data needs.

01/2024 – 08/2024
Kampala, Uganda

Junior Developer Intern, Raining Vegetables

- Implemented application features, performed data cleaning, and delivered web solutions using HTML, CSS, JavaScript, and PHP.
- Practised issue and bug tracking with Jira and maintained project documentation to support team delivery and client reporting.
- Supported backend system operations and contributed to client application maintenance.

Projects

2024 – 2025

Fast Savers Loan Management System

- Lead developer for the initial release of a financial loan management system; supported over 10 agents during the maintenance and user acceptance phase.

02/2024 – Present

Phronesis: Diagnosis System for CT Scan Images

- Leading development of a machine learning app to automate CT scan diagnosis for doctors.
- Managing a team of 3 engineers through model development, testing, and integration.
- Responsible for the architectural integration and CI/CD and ensuring site reliability
- Raised \$20k in funding for product market launch

Automated Forex Trading Bot

- Designed and deployed an automated forex trading bot executing trades on MetaTrader 5 (MT5) using technical analysis — demonstrating exposure to financial systems and transaction automation.

08/2025 – 2026

DealZako , Real Estate Management System

- Led a team of 3 (UI Designer, Front End Developer and BackendDevelopment) to build a product to solve current gap of brokers in the real estate business. Currently being piloted with Eliberts Real Estate

Education

2022 – 2025
Kampala, Uganda

Bachelors of Science in Software Engineering, Makerere University

Certificates

- Kubernetes and Cloud Native Associate [↗](#)
- FSD Uganda Platform Economy Masterclass [↗](#)
- Github Foundations [↗](#)

Skills

Linux Administration • **Programming Languages** — Competent in native **PHP** and the **Laravel** framework and **CodeIgnitor** as well | Skilled in **Python** with Django | Proficient in **CSS** Frameworks; Bootstrap, Tailwind | NuxtJS, VueJS, Strapi CMS, NodeJS • **IT Operations & Service Delivery** — End-user support (device provisioning, installations, troubleshooting) | Documentation/how-tos, first-contact resolution improvement | Asset inventory, procurement support (quotations, licensing, vendor evaluation) • **Enterprise Integrations & Vendors** — Vendor coordination, SLA/rollout support | API/integration support incl. **Microsoft Dynamics 365 Business Central connectors** • **Systems & Platforms** — Linux administration, basic server operations & routine maintenance | Microsoft 365 / SharePoint, business application support (IMS) • **DevOps / Delivery** — Docker, GitHub Actions (CI/CD), Git (branching standards), release support | Jira (issue tracking, change management workflow) • **Teamwork & Collaboration** • **Machine Learning** — I am familiar with using & deploying different machine learning models (deep learning models) in real world projects • **AWS**

Languages

English — Very fluent and very good at creative writing in English

Kiswahili
